Optimal Pressure Relief
Broadest Surface Area
Most Comfortable

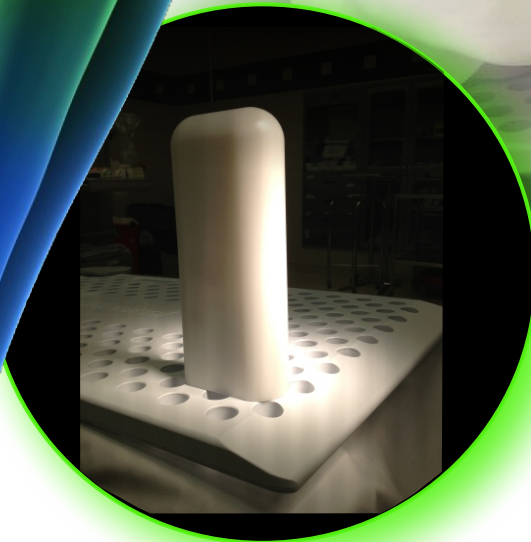

*broad***head**

Superior

PRESSURE RELIEF

- Protects skin integrity in lateral decubitus
- Double wide pegs reduce pressure on bony prominences
- Tapered pegboard ends reduce contact with pressure points

Improved

CIRCULATION

- Broad surface area allows for better blood flow preventing tissue death that leads to pressure ulcers
- Smooth, rounded surfaces can help to avoid shear injury

Versatile

Utility

- Streamlined assembly as easy as putting a peg in a hole
- Practical alternative for lower extremity arthroscopic thigh bolster and bumps
- Smooth, non-grip surface allows for comprehensive cleaning
- Optional peg shapes and sizes provide support and stability in a broad range of procedures
